SAMSUNG DISPLAY

GENERAL DESCRIPTION

DESCRIPTION

The LTA230AN01 is the one of liquid crystal display devices(LCD) that uses an amorphous silicon TFT(Thin Film Transistor) as switching components and a color active matrix. This model is composed of a TFT LCD panel, a driver circuit, and a back-light unit. This 23.0" model has a resolution of 1366 x 768 pixels and can display up to 16.7Million colors with the wide viewing angle of 89° or higher in all directions.

FEATURES

RoHS compliance(Pb-Free)
High contrast ratio & aperture ratio with the wide color gamut
SVA(Super Vertical align) mode
Wide Viewing angle(±178°)
High speed response
HD resolution(16:9)
Low Power consumption
wLED 1side edge BLU
DE(Data enable) mode
The interface(1pixel/clock) of 1ch LVDS(Differential signaling with a low voltage)

APPLICATIONS

Home-alone Multimedia TFT-LCD TV
High Definition TV

GENERAL INFORMATION

Items	Specification	Unit	Note
Module Size	534.0 (H) x 311.8 (V)	mm	±0.5
	11.1 (Dmax)		w/o converter
Weight	2100	g	max
Pixel Pitch	0.372(H) x 0.372(W)	mm	
Active Display Area	508.152(H) X 285.696 (V)	mm	
Surface Treatment	Anti Glare		
Display Colors	8bit - 16.7M	colors	
Number of Pixels	1366 x 768	pixel	16 : 9
Pixel Arrangement	RGB vertical stripe		
Display Mode	Normally Black		
Luminance of White	250	cd/m^2

# 1. ABSOLUTE MAXIMUM RATINGS

1.1 ENVIRONMENTAL ABSOLUTE RATINGS

Item	Symbol	Min.	Max.	Unit	Note
Power supply voltage	VDD	GND-0.3	13.2	V	(1)
Storage temperate	T_{STG}	-20	60	°C	(1)
Operating temperature	T_{OPR}	0	50	°C	(1)
Shock （non-operating）	Snop(X,Y,Z)	-	50	G	(2), (4)
Vibration (non-operating)	Vnop		1.5	G	(3), (4)

Note (1) The ranges of temperature and relative humidity are shown in the graph below. 90% RH Max.
(The temperature of Ta shall be over 39℃.)
The maximum temperature of wet–bulb shall be less than 39℃.
No condensation
Note (2) 20ms, one time for ±X, ±Y, ±Z axis
Note (3) 10-300 Hz, Sweep rate 11min, 30min for X,Y,Z axis
Note (4) The fixture for the test of the vibration and shock, which holds the module to be tested shall be hard and rigid in order for the module not to be twisted or bent by the fixture.

SAMSUNG DISPLAY

2. OPTICAL CHARACTERISTICS

The optical characteristics shall be measured in the dark room or the space surrounded by the similar ambient setting.
Measuring equipment : TOPCON RD-80S, TOPCON SR-3, ELDIM EZ-Contrast

Ta = 25 ± 2 °C, V_{VDD} =12V, fv= 60Hz, fDCLK = 78MHz, IF = 100% duty

Item		Symbol	Condition	Min.	Typ.	Max.	Unit	Note
Contrast Ratio		CR		3000	4000	-	-	(1) SR-3
Response time	G-to-G	Tg	$T_{PAN.SUR}$ = 29.9℃	-	8	16	msec	(3) RD-80S
Luminance of White (At the center of screen)		Y_L		200	250	-	cd/m²	(4) SR-3
Color Chromaticity (CIE 1931)	Red	R_X	Normal ϕ = 0 θ = 0 Viewing Angle	-0.03	0.645	+0.03	-	(5),(6) SR-3
		R_Y			0.338			
	Green	G_X			0.302			
		G_Y			0.603			
	Blue	B_X			0.149			
		B_Y			0.067			
	White	W_X			0.285			
		W_Y			0.311			
Color Gamut		-	-	-	68	-	%	(5) SR-3
Color temperature		-	-	-	8500	-	K	
Viewing Angle	Hor.	$θ_L$	CR ≥ 10	70	85	-	Degree	(6) SR-3 EZ-Contrast
		$θ_R$		70	85	-		
	Ver.	$ϕ_U$		70	80	-		
		$ϕ_D$		70	80	-		
Brightness Uniformity (9 Point)		B_{uni}	-	-	-	30	%	(2) SR-3

SAMSUNG DISPLAY

- Test equipment for setup
    The measurement shall be executed under the condition including a stable, windless and dark room for 40min or 60min with lighting the back-light at the given temperature, which is suitable to stabilize the back-light.
    The module shall be measured at the center of screen.
    The ideal temperature for setup shall be the value derived from the formula, Ta = 25 ± 2 ℃.

Note (1) Definition of Viewing angle : The range of Viewing angle (10 ≤ C/R)
        : Ratio of max. gray (Gmax) & min. gray (Gmin) at the center point of the panel

$$C/R = \frac{Gmax}{Gmin}$$

Gmax : Luminance in all white pixels
Gmin : Luminance in all black pixels.

Note (2) Definition of brightness uniformity at 9 points (Test pattern : Full white)

$$Buni = 100 * \frac{(B\max - B\min)}{B\max}$$

Bmax : Maximum brightness
Bmin : Minimum brightness

H/6   H/2   5H/6

V/6   ①   ②   ③

V/2   ④   ⑤   ⑥

5V/6   ⑦   ⑧   ⑨
H : Horizontal length of Active Area
V : Vertical height of Active Area.

Note (3) Definition of response time : Sum of Tr, Tf
※ G-to-G : Average response time between the whole gray scale to the whole gray scale.

SAMSUNG DISPLAY

Note (4) The definition of luminance of white: The luminance of white at the center point ⑤

Note (5) The definition of chromaticity (CIE 1931)
  The color coordinate of red, green, blue and white at the center point ⑤

Note (6) Definition of viewing angle : The range of viewing angle   (C/R ≥10)

SAMSUNG DISPLAY

3. ELECTRICAL CHARACTERISTICS

3.1 TFT LCD MODULE

The connector to transmit a display data and a timing signal shall be connected.

* Ta = 25 ± 2 ℃

| Item		Symbol	Min.	Typ.	Max.	Unit	Note
Voltage of Power Supply		V_{DD}	10.8	12.0	13.2	V	(1)
Current of Power Supply	(a) Black	I_{DD}	-	313	415	mA	(2), (3)
	(b) White		-	305	410		
	(c) V- Stripe		-	559	660		
Vsync Frequency		f_V	50	60	66	Hz	-
Hsync Frequency		f_H	44	48	53	kHz	-
Main Frequency		F_{dclk}	72	78	85	MHz	-
Rush Current		I_{RUSH}	-	-	4	A	(4)

Note (1) The voltage for ripple shall be controlled under the range, which is lower than 10% of V_{DD} voltage.

Note (2) fV=60Hz, fDCLK =78MHz, V_{DD} = 12.0V, DC Current.

Note (3) The pattern for checking the power dissipation (LCD module only)

a) Black Pattern	b) White Pattern	c) V-stripe
Note (4) Conditions for measurement
The rush current, I_{RUSH} can be measured when T_{RUSH} is 470μs.

4. INPUT TERMINAL PIN ASSIGNMENT

4.1 INPUT SIGNAL & POWER

Connector : IS100-L30O-C23

INPUT CONNECTOR PIN MAP			
NO	PIN	NO	PIN
1	VIN	16	LV1_P
2	VIN	17	GND
3	VIN	18	LV2_N
4	VIN	19	LV2_P
5	NC	20	GND
6	GND	21	LVCLK_N
7	GND	22	LVCLK_P
8	NC	23	GND
9	LVDS_SEL	24	LV3_N
10	NC	25	LV3_P
11	GND	26	GND
12	LV0_N	27	NC
13	LV0_P	28	NC
14	GND	29	NC
15	LV1_N	30	GND

NOTE (1) NC : Not connection, PINs are used SDC only
NOTE (2) LVDS Option : If this pin is high (3.3V) → Normal LVDS format
                                        Low (GND) → JEIDA LVDS format
NOTE (3) : Pin number, which starts from the left side.
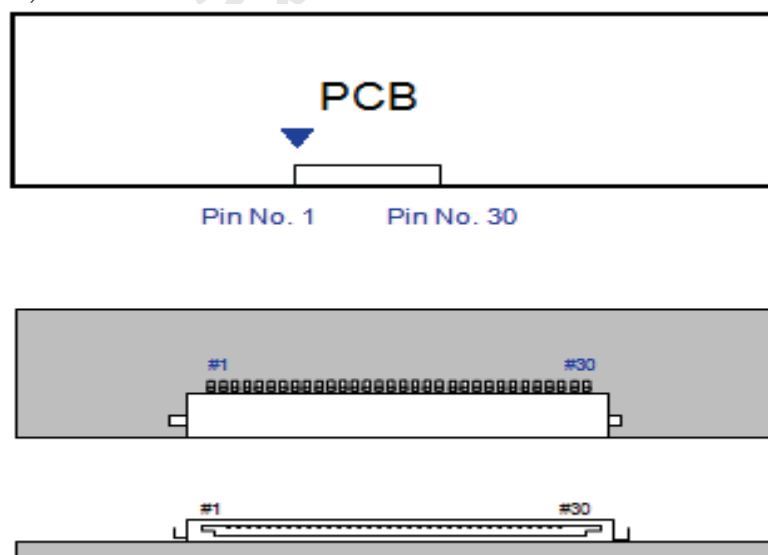

Fig. Connector diagram

a. Pins for power GND shall be connected to the LCD's metal chassis.
b. All input pins for power shall be connected together.
c. All NC pins shall be designed with being separated from other signal or power.

	Differential Input Voltage	$|V_{ID}|$	100		600	mV	
AC characteristics	Input data position	T_{RSRM}	-	-	450	ps	$F_{IN}=78MHz$
		T_{RSLM}	-450	-	-	ps	
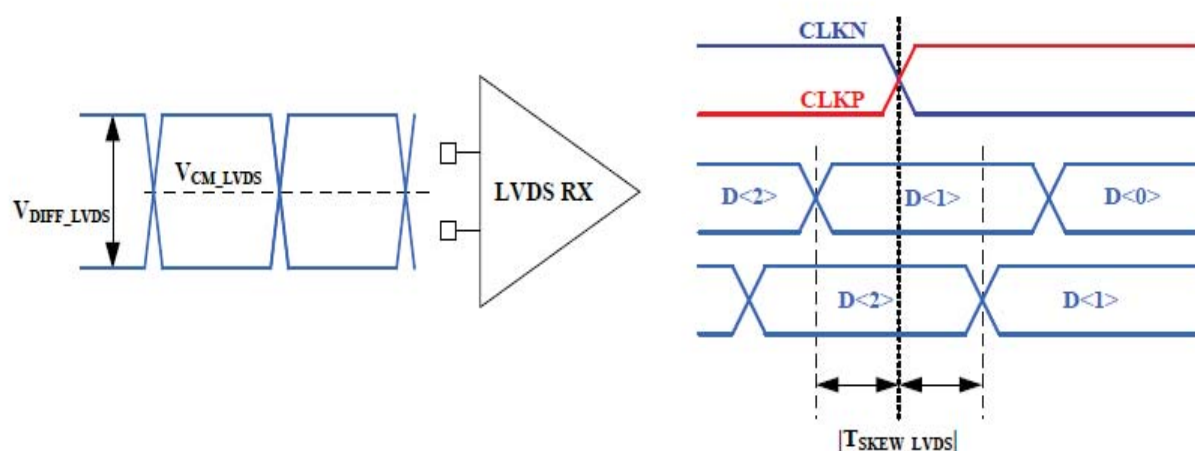

SAMSUNG DISPLAY

5.4 THE SEQUENCE OF POWER ON AND OFF

To prevent the product from being latched up or the DC in the LCD module from starting an operation, the order to turn the power on and off should be changed to the order as shown in the diagram below.
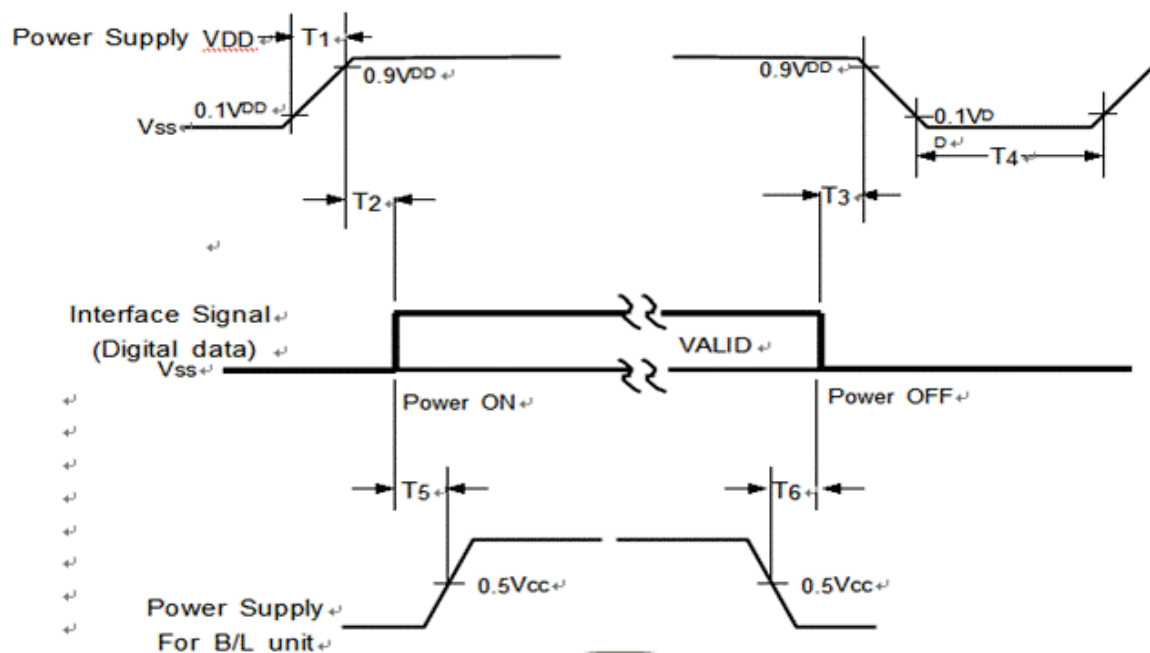

Timing	Spec	Remarks
T_1	0.5 msec<T1≤10msec	The time, during which the level of V_{DD} is rising from 10% to 90%.
T_2	10 msec<T2≤50msec	The changing time, during which the V_{DD} starts rising beyond 90% until the valid data of signal started coming in.
T_3	0msec<T3≤50msec	The changing time, during which the valid data of signal starts leaving out until the V_{DD} starts falling below 90%.
T_4	1000msec≤T4	The changing time, during which the V_{DD} starts falling below 10% to restart the Windows.
T_5	1000msec≤T5 (BLU ON TIME)	The changing time, during which the signal of BLU starts rising beyond 50%.
T_6	100msec≤T6	The changing time, during which the signal of BLU starts falling below 50%.

- The inputted V_{DD}'s value for supply voltage, BLU, and signal to the external system of the module shall be computed with referring to the former mentioned value.
- The method to apply the voltage to the lamp within the range, which the LCD operates. When the back-light is turned on before the LCD is operated or the power of LCD is turned off before the back-light is turned off, the abnormal display on the screen may be shown momentarily.
- Please keep the level of input signal low or keep the level of impedance high when the value of V_{DD} is below 10%.
- The value shall be measured after the module has been fully discharged between the period, which the power is turned on and the period, which the power is turned off like the T4 timing. The backlight may be flashed if the interface signal remains floated when the above-mentioned signal becomes invalid.

9. GENERAL PRECAUTIONS

9.1 HANDLING

(a) When the module is assembled, It should be attached to the system firmly using every mounting holes. Be careful not to twist and bend the module.

(b) Refrain from strong mechanical shock and / or any force to the module. In addition to damage, this may cause improper operation or damage to the module and LED back-light.

(c) Note that polarizers are very fragile and could be easily damaged. Do not press or scratch the surface harder than a HB pencil lead.

(d) Wipe off water droplets or oil immediately. If you leave the droplets for a long time, Staining and discoloration may occur.

(e) If the surface of the polarizer is dirty, clean it using some absorbent cotton or soft cloth.

(f) The desirable cleaners are water, IPA (Isoprophyl Alcohol) or Hexane. Do not use Ketone type materials(ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanent damage to the polarizer due to chemical reaction.

(g) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth .In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.

(h) Protect the module from static , it may cause damage to the C-MOS Gate Array IC.

(i) Use fingerstalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.

(j) Do not disassemble the module.

(k) Do not pull or fold the LED FPC.

(l) Do not touch any component which is located on the back side.

(m) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.

(n) Pins of I/F connector shall not be touched directly with bare hands.

(o) Because the converter use high voltage, it should be disconnected from power before it is assembled or disassembled.

9.2 STORAGE

We highly recommend to comply with the criteria in the table below.

ITEM	Unit	Min.	Max.
Storage Temperature	(℃)	5	40
Storage Humidity	(%rH)	35	75
Storage Life	12 months		
Storage Condition	- The storage room should be equipped with a good ventilation facility, which has a temperature controlling system. - Products should be placed on the pallet, which is away from the wall not on the floor. - Prevent products from being exposed to the direct sunlight, moisture, and water.; Be cautious not to pile the products up. - Avoid storing products in the environment, which other hazardous material is placed. - If products are delivered or kept in the storage facility more than 3 months,we recommend you to leave products under the condition including a 20℃ temperature and a humidity of 50% for 24 hours. - If you store semi-manufactured products for more than 3 months, bake the products under the condition including the 50℃ temp. and the 10% humidity for 24hrs after being used.		

9.3 OPERATION

(a) Do not connect or disconnect the cable to/ from the module at the "Power On" condition.
(b) The power shall be always turned on/off by the item 6.5. "Power on/off sequence"
(c) The module has a circuit with a high frequency. The system manufacturers shall suppress the electromagnetic interference sufficiently. The methods to ground and shield are important to minimize the interference.
(d) Design the length of cable to connect between the connector for back-light and the Converter as short as possible and the shorter cable shall be connected directly.
The longer cable between that of back-light and that of Converter may cause the luminance of LED package to lower and need a higher startup voltage(Vs).

SAMSUNG DISPLAY

9.4 Operation Condition Guide

(a) The LCD product should be operated under normal conditions. Normal condition is defined as below;
- Temperature : 20±15℃
- Humidity : 55±20%
- Display pattern : continually changing pattern (Not stationary)

(b) If the product will be used in extreme conditions such as high temperature,   humidity, display patterns or operation time etc.., It is strongly recommended   to contact SDC for Application engineering advice. Otherwise, its reliability and   function may not be guaranteed. Extreme conditions are commonly found at   Airports, Transit Stations, Banks, Stock market, and Controlling systems.

9.5 OTHERS

(a) The filter for ultra-violet ray is needed when you operate a product outdoor.
(b) Avoid placing the product in the environment, which water is condensed. The former mentioned condition may lead a product to operate improperly or an electrode to be disconnected.
(c) Do not exceed the ceiling of absolute maximum rating. (Various supply voltages, Various input voltages, Various contents on the part, various environmental temperatures, and so on) Otherwise, the module may be damaged.
(d) If the module displays the same pattern for a long time, the situation can be the image sticking to the screen.
(e) This module shall be handled carefully in order not to be stressed by the object from outside since this module contains a circuitry for PCB on the rear side.
